Profile

Computer Science graduate with First-Class Honours and experience in full-stack software development, mobile application development, and AI solutions. Skilled in Python, Flutter, Firebase, JavaScript, SQL, and Git, with experience developing cloud-integrated applications, machine learning models, and user-focused software. Strong understanding of software engineering principles, agile development methodologies, and the software development lifecycle.

Education

Degree: BSc Computer Science | Birmingham Newman University | First-Class Honours

A Levels: Physics, Chemistry and Engineering | Halesowen College

Relevant Modules:

- IoT – 92%
- Machine Learning – 91%
- Mobile Application Development – 88%
- Creative Computing – 84%
- Cyber Security – 77%
- Natural Language Processing – 75%

Technical Skills

Python, JavaScript, C#, Dart, Kotlin • Flutter • Node.js • Firebase • SQL • HTML/CSS • Git/GitHub • Android Studio • VS Code • Full-Stack Development • Machine Learning

Projects

Gamified Chore Application | Dissertation Project

- Developed a cross-platform mobile application using Flutter and Firebase to improve engagement with household task management through gamification.
- Implemented responsive UI components and cloud-based NoSQL data storage using Firebase Firestore.

Speech-to-Text Recognition Application | Natural Language Processing

- Developed an AI-powered speech recognition application capable of converting spoken audio into written text.
- Implemented speaker differentiation functionality to identify when a new speaker began talking during conversations.

Animal Detection AI Model | Deep Learning

- Developed and trained a deep learning image classification model using Python to distinguish animals from inanimate objects.
- Preprocessed image datasets and evaluated model performance using validation testing techniques.

Medical Emergency Wearable Device | Internet of Things

- Developed a wearable monitoring device using Arduino Nano BLE to detect falls and abnormal movement patterns.
- Integrated Bluetooth communication to transmit emergency status updates to a connected mobile application.
